

Knowledge building: CHEM Trust vision 2030

People and environment are no longer exposed to synthetic chemicals that disrupt sensitive body systems, including hormonal, immune & brain

Objectives

- Better identification of hazards, e.g. EDC, neurodevelopmental, immune
- Understanding susceptibilities, including genetic & developmental
- Understanding & acting on contamination

Actions

- Implement mixture assessment techniques in regulation (2020)
- Initiate research on genetic susceptibilities & on producer responsibility for contaminated products (2020)
- Apply in vitro and in silico tests & use HBM4EU data in regulation; enforce clean circular economy; (2022-2025)
- Protect the susceptible & force clean-up of contaminated products (2025)
